

SupplyPro VIM

VIRTUAL INVENTORY MANAGEMENT — CONTROL OUTSIDE THE DEVICE

SupplyPro Virtual Inventory Management (VIM™) allows those with SupplyLink™ to track transactions for products not physically within a SupplyPro® device. With proper user participation, items are easily tracked with full SupplyPort® reporting capabilities and business rules.

SUPPLYPRO VIM DELIVERS

- Administrator loads items into SupplyLink
- User logs in and chooses item(s)
- SupplyLink screen shows users where the item is stored (rack, bin, shelf, closet, etc.)
- Transaction is recorded in SupplyPort
- VIM reports generated on schedule or on demand

FEATURES

- VIM is a module available on SupplyLink
- All standard SupplyPort reporting, ordering, business rules and permissions apply
- Standard options available for automated reports and interfaces
- All product characteristics and features available as if item is managed in a machine (loan periods, serialization, allocation codes, kits, etc.)
- VIM storage locations can be assigned by the system or custom named by the administrator
- Manage up to 2,000 items per VIM
- The latest SupplyLink and device software required

APPLICATIONS
