

SmartStation

SMARTER INVENTORY —
ANYWHERE YOU NEED IT

The SupplyPro SmartStation™ is a flexible, high-performance inventory control solution that brings secure, intelligent access wherever it's needed most — at the tool crib or on the line. Available as a fixed workstation, SmartStation empowers teams to manage inventory close to the work — without delay, complexity or compromise.

Whether issuing cutting tools in a busy shop, managing PPE in a warehouse, or issuing MRO parts from the storeroom, SmartStation turns any location into a smart inventory hub.

SMARTSTATION DELIVERS

- **Speed of transaction: Tap. Scan. Done.** — SmartStation is engineered for speed, so workers spend less time managing inventory and more time using it. With intuitive workflows and predictive prompts, transactions are completed in seconds. No queues. No confusion. No wasted motion. It's speed, redefined.
- **Ease of use: Simple today, powerful tomorrow** — The interface is built for how people actually work: fast, familiar and role-based. From day one, workers get exactly what they need — while advanced features like cost center allocation and job order tracking are ready when your operation is.
- **Flexible deployment, instant impact** — Turn any bench, table or cart into a full-service inventory control point. Reduce walk-time, improve parts access and manage inventory where the work actually happens.

FEATURES

- **Fully supported by SupplyPro Intelligent Software** — Every SmartStation is powered by SupplyPro's cloud-based platform — delivering live inventory visibility, traceability and access control across all users, sites and SKUs.
- **Two platform versions** — 1. Nextgen shopping software with wireless scanner for simplified issuance to users or 2. Existing legacy device software which supports serialization, PAG's and all other advanced features.
- **Automated reports and standard interfaces** — From lot and expiry tracking to automated replenishment, approval workflows and serialized item control, SmartStation runs the SupplyPro software suite — configurable to your environment and scalable across your operation.

APPLICATIONS

- Tool cribs and storerooms
- Production lines
- Assembly cells
- Remote sites
- Order pick stations

SPECIFICATIONS

- 12.5" industrial touchscreen interface
- Wireless barcode scanner
- Prox card / RFID reader
- Full keyboard and secure login
- Compact desktop footprint
- Rugged — can operate in harsh manufacturing environments
- Fanless
- Cannot run other SupplyPro devices
